An electric motor is an electrical machine that converts electrical energy into mechanical energy. Most electric motors operate through the interaction between the motor's magnetic field and winding currents to generate force in the form of rotation. Electric motors can be powered by direct current (DC) sources, such as from batteries, motor vehicles or rectifiers, or by alternating current (AC ...

An ion thruster or ion drive is a form of electric propulsion used for spacecraft propulsion. It creates thrust by accelerating positive ions with electricity. The term refers strictly to gridded electrostatic ion thrusters, and is often incorrectly loosely applied to all electric propulsion systems including electromagnetic plasma thrusters. [citation needed]

80% of communities are served ONLY by trucks because there are 4.1 million miles of roads but only 95,000 route miles of rail tracks. I too would like to see more rail, but all of the rail companies are privately owned, and more than any other industry they have to plow most of their profits back into maintaining their rail lines.
