the functions of single variable calculus, we shall see that we will often be able to reduce problems involving functions of several variables to related problems involving only single variable functions, problems which we may then handle using already familiar techniques.

example from multivariable calculus. 1. A first example Consider the function $f(u,v) = (u^2 + v, uv)$. It takes a point (u,v) in the plane and hands back another point, $(u^2 + v, uv)$. For example, $f(2,3) = (2^2 + 3, 2 \cdot 3) = (7,6)$. Our first task is to produce a picture of f . In one variable calculus, one usually pictures a function by drawing its graph.
