

**dataflow and reactive programming pdf**

In computer programming, dataflow programming is a programming paradigm that models a program as a directed graph of the data flowing between operations, thus implementing dataflow principles and architecture. Dataflow programming languages share some features of functional languages, and were generally developed in order to bring some functional concepts to a language more suitable for ...

**Dataflow programming - Wikipedia**

Software architecture. Dataflow is a software paradigm based on the idea of disconnecting computational actors into stages (pipelines) that can execute concurrently.
