The electron is a subatomic particle, symbol e^- or β^- , whose electric charge is negative one elementary charge. Electrons belong to the first generation of the lepton particle family, and are generally thought to be elementary particles because they have no known components or substructure. The electron has a mass that is approximately 1/1836 that of the proton.

The cathode-ray tube (CRT) is a vacuum tube that contains one or more electron guns and a phosphorescent screen, and is used to display images. It modulates, accelerates, and deflects electron beam(s) onto the screen to create the images. The images may represent electrical waveforms (oscilloscope), pictures (television, computer monitor), radar targets, or other phenomena.

Electron beam welding, despite a long history and widespread arc and laser technology, is still widely used in industry. The main applications for this high efficiency welding process are: automotive, electronics, electrical engineering, aerospace and mechanical engineering industry.

The μ Tracer, a miniature Tube Curve Tracer / Tester. This extremely small Tube Tester measures tube characteristics in a pulsed mode. In this way the circuit can be kept very small while the use of "heavy" high power / dissipation components can be avoided.

10. TEST EQUIPMENT - Invest in a good bench-top or handheld multimeter. Look for one with an auto-ranging feature. This feature allows the meter to automatically adjust to the proper range for testing.
