fundamental cells in digital signal processors (DSP) and central processing units (CPU). The performance of a multiplier is usually the speed bottleneck of above-mentioned digital systems [1]. The modified Booth algorithm is a common approach to the VLSI design of high speed multipliers because the number of additions in multiplication is ...

DSP in High Performance Oscilloscopes John J. Pickerd Systems Engineering Tektronix, Inc. Beaverton, Oregon 97077, USA Abstract: The digital signal processing revolution began around 1980 as the first dedicated digital signal processors began to appear. Since that time DSP has been incorporated into just about every aspect of modern electronics.
