The percentage of antioxidant activity (aa%) of each substance was assessed by DPPH free radical assay. The measurement of the DPPH radical scavenging activity was performed according to methodology described by Brand-Williams et al. (11). The samples were reacted with the stable DPPH radical in an ethanol solution.

Antioxidant Activity by DPPH Assay of Potential Solutions

The diameter and intensity of the yellow spot depends on the amount of known amount and concentrations of the solutions. We can judge the potency of the test sample. f values for each hand can be calculated and photographs can be taken. 40 Åµg shows equal antioxidant property with that of 50 Åµg of rutin by this method¹⁰.
