Integrated circuit design, or IC design, is a subset of electronics engineering, encompassing the particular logic and circuit design techniques required to design integrated circuits, or ICs. ICs consist of miniaturized electronic components built into an electrical network on a monolithic semiconductor substrate by photolithography.. IC design can be divided into the broad categories of ...

The pipelined datapath is the most commonly used datapath design in microarchitecture today. This technique is used in most modern microprocessors, microcontrollers, and DSPs. The pipelined architecture allows multiple instructions to overlap in execution, much like an assembly line.

To improve resource usage, there are several ways of compressing models to smaller sizes, such as gaining sparsity of network connections and narrowing data bit-width. Binarization is a promising method to compress the NN models, which can directly shrink the bit-width of inputs and weights from 32 bit (single-precision floating-point) to a single bit.
