Chapter 8. Chemical Dynamics Chemical dynamics is a field in which scientists study the rates and mechanisms of chemical reactions. It also involves the study of how energy is transferred among molecules as they undergo collisions in gas-phase or condensed-phase environments.

Chemical dynamics was prepared to the next epoch, that is to the analysis of complex reaction networks. The scientific context of the first decades of chemical dynamics was also very important.

CHM1485: Molecular Dynamics and Chemical Dynamics in Liquids Stochastic Models - Part I October 18, 2005 1 Stochastic Modeling Stochastic systems are systems with randomness, i.e. with a non-deterministic element, but in which the statistics of the randomness is somehow known. A simple example of a stochastic process in the coin toss.

In 1864, Peter Waage and Cato Guldberg pioneered the development of chemical kinetics by formulating the law of mass action, which states that the speed of a chemical reaction is proportional to the quantity of the reacting substances. Van 't Hoff studied chemical dynamics and published in 1884 his famous "Etudes de dynamique chimique".
