Lecture Notes in Oceanography by Matthias Tomczak 8 With this proviso, let us proceed to the study of physical processes in nature and look at three examples: convection, eddies and waves. Convection A fluid can be stratified, which means that its density can vary. For a fluid to be in a stable state,

Chapter 6 The equations of fluid motion In order to proceed further with our discussion of the circulation of the atmosphere, and later the ocean, we must develop some of the underlying theory governing the motion of a fluid on the spinning Earth. A differentially heated, stratified fluid on a rotating planet cannot move in arbitrary paths.
